

STARRY NIGHTS

DANIEL M SOREF
PLANETARIUM

April 2020

HOW TO USE THIS MAP

MPM's sky map shows the night sky as it appears on various dates and times. The sky lies overhead so we've designed the map to be held above your head. Compass directions are indicated along the edge of the circle. Turn the sky map around its center so the compass direction that appears along the bottom of the map is the same as the direction that you face. Begin by using the sky map to find a bright star pattern in the sky.

BEST VIEWS

Early April around 10:30 p.m.; late April around 9:30 p.m. Best to use the chart within an hour of the times listed. This chart is drawn for 43 degrees latitude but may be applied throughout the continental USA.

APRIL MORNING SKY

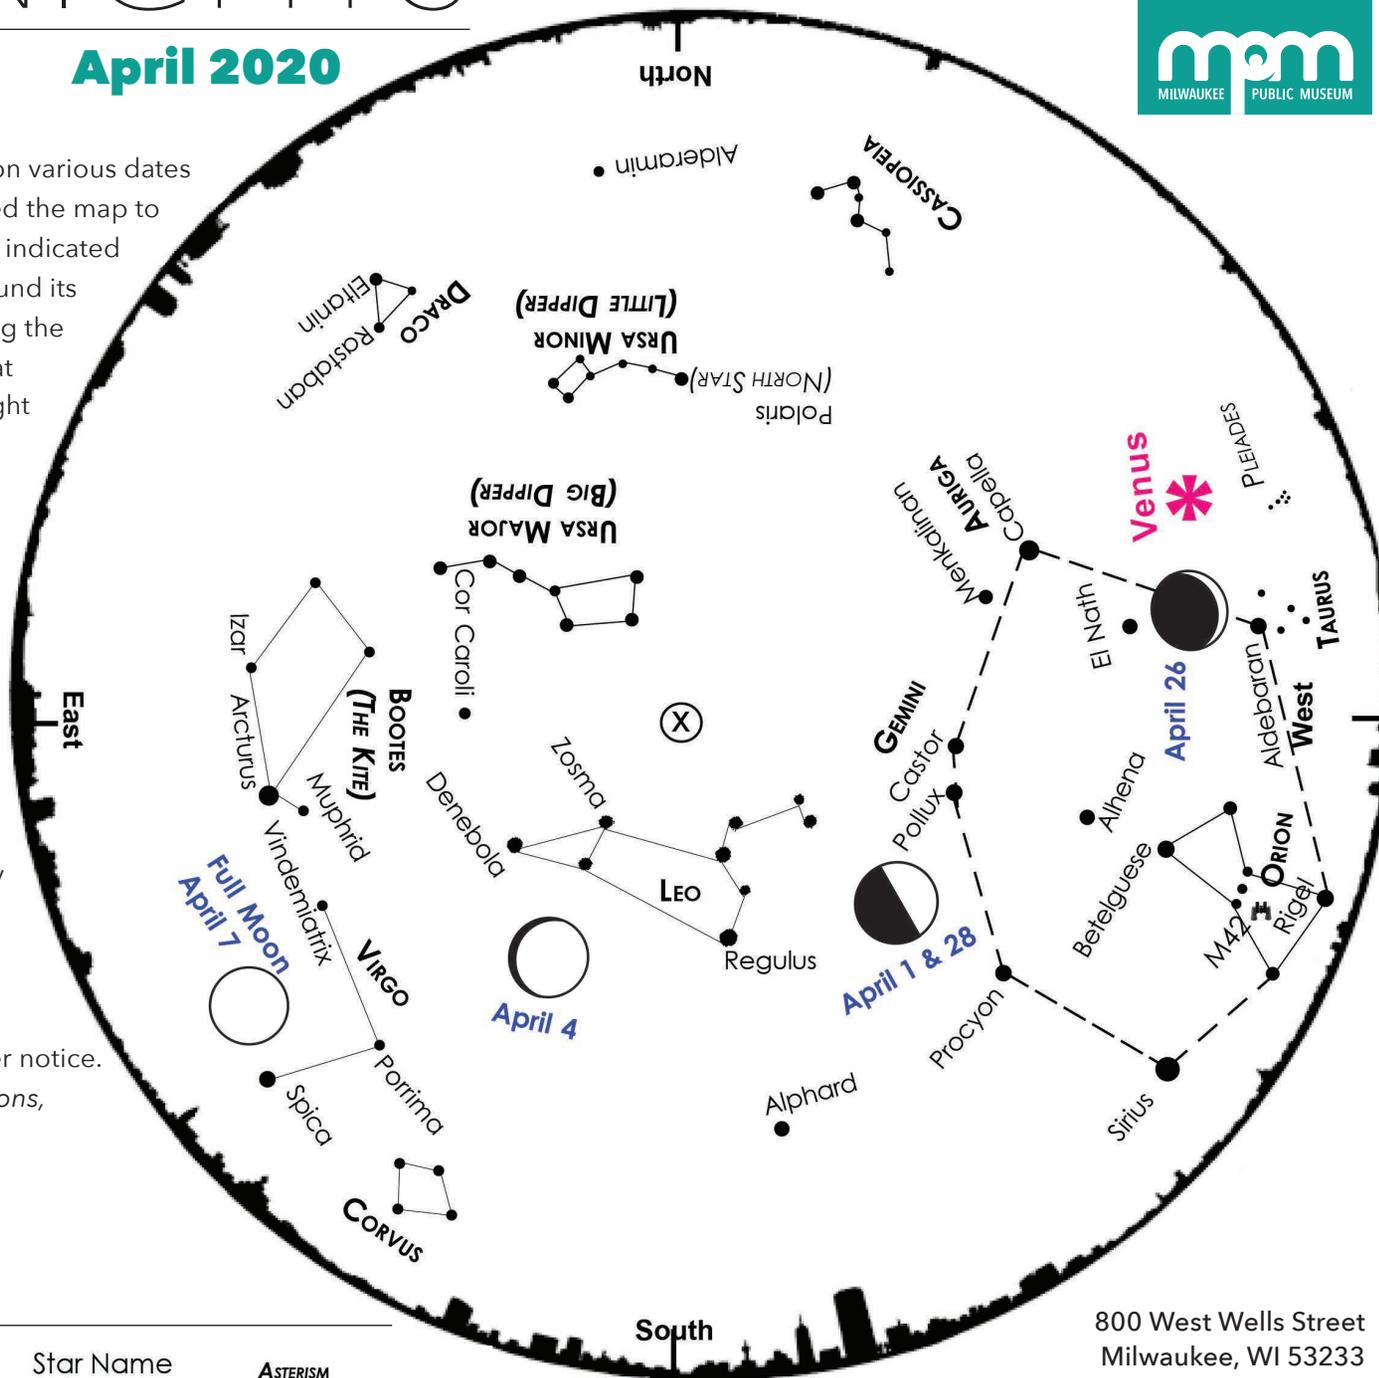

Jupiter rises 3.5 hours before the Sun. Soon followed by Saturn and Mars. The Moon passes by from April 14-16. The Summer Triangle can be seen high in the sky.

NOW PLAYING

The Planetarium is closed for Covid-19 until further notice. When we re-open, we welcome you to *Constellations*, *Wisconsin Stargazing*, and *One World, One Sky*.
