

STARRY NIGHTS

DANIEL M SOREF
PLANETARIUM

October 2020

HOW TO USE THIS MAP

MPM's sky map shows the night sky as it appears on various dates and times. The sky lies overhead so we've designed the map to be held above your head. Compass directions are indicated along the edge of the circle. Turn the sky map around its center so the compass direction that appears along the bottom of the map is the same as the direction that you face. Begin by using the sky map to find a bright star pattern in the sky.

BEST VIEWS

October 1 at 9 p.m., October 15 at 8 p.m.,
October 31 at 7 p.m. Best to use the chart within
an hour of the times listed. This chart is drawn for
43 degrees latitude but may be applied
throughout the continental USA.

OCTOBER MORNING SKY

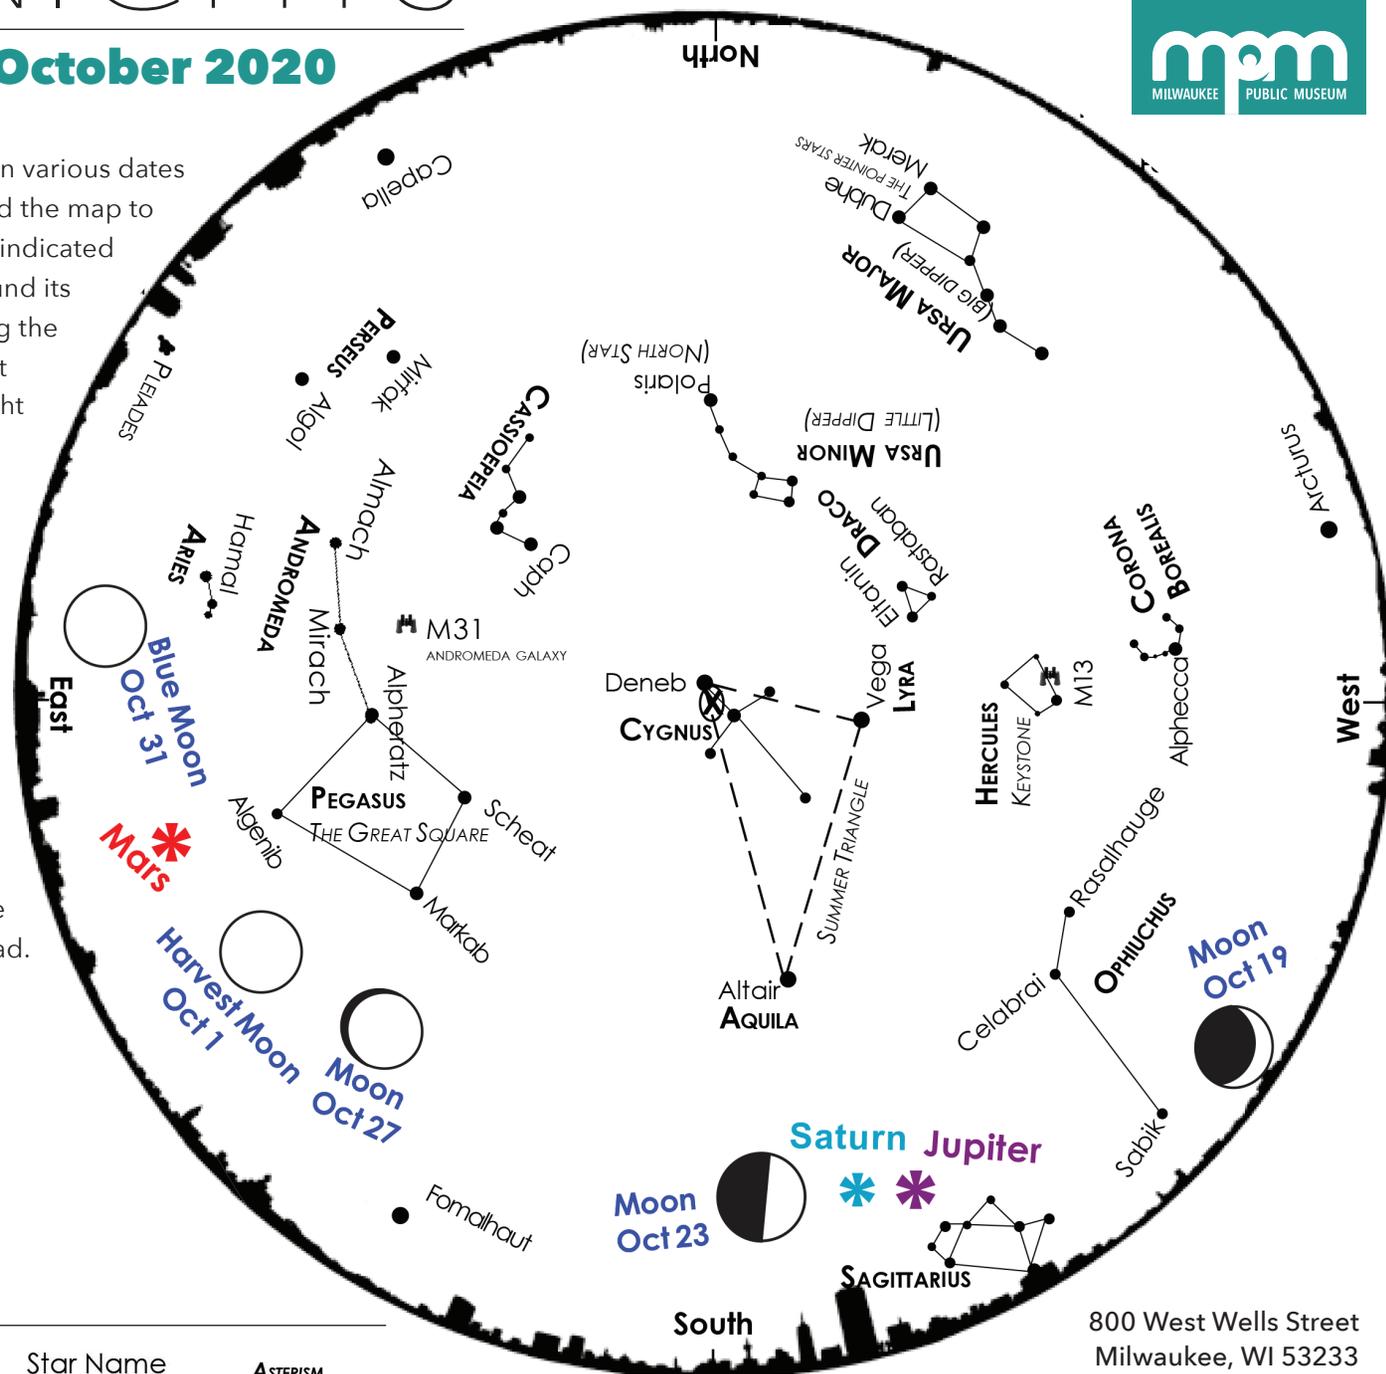

Venus is very visible in the east. Watch the
brightest planet move through the stars of Leo
the Lion. Orion and bright Sirius can be seen in the
southwest sky. The Big Dipper is now high overhead.
