HOW TO USE THIS MAP

MPM's star map shows the night sky as it appears on various dates and times. It is designed to be held above your head. Compass directions are indicated along the edge of the circle. Turn the map around its center so the compass direction that appears along the bottom of the map is the same as the direction you face.

APRIL MORNING SKY

Mars and Saturn are low in the southeast but climbing higher. Look for the Moon to pass by April 5 - 6. The Summer Triangle can be seen high in the sky.
