

HOW TO USE THIS MAP

MPM's star map shows the night sky as it appears on various dates and times. It is designed to be held above your head. Compass directions are indicated along the edge of the circle. Turn the map around its center so the compass direction that appears along the bottom of the map is the same as the direction you face.

BEST VIEWS

February 1 around 9 p.m.;
February 15 around 8 p.m.;
February 29 around 7 p.m. Best to use the chart within an hour of the times listed. This chart is drawn for 43 degrees latitude but may be applied throughout the continental USA.

PLANETARIUM

FEBRUARY MORNING SKY

Venus sinks lower in SE sky, but still very visible before sunrise.

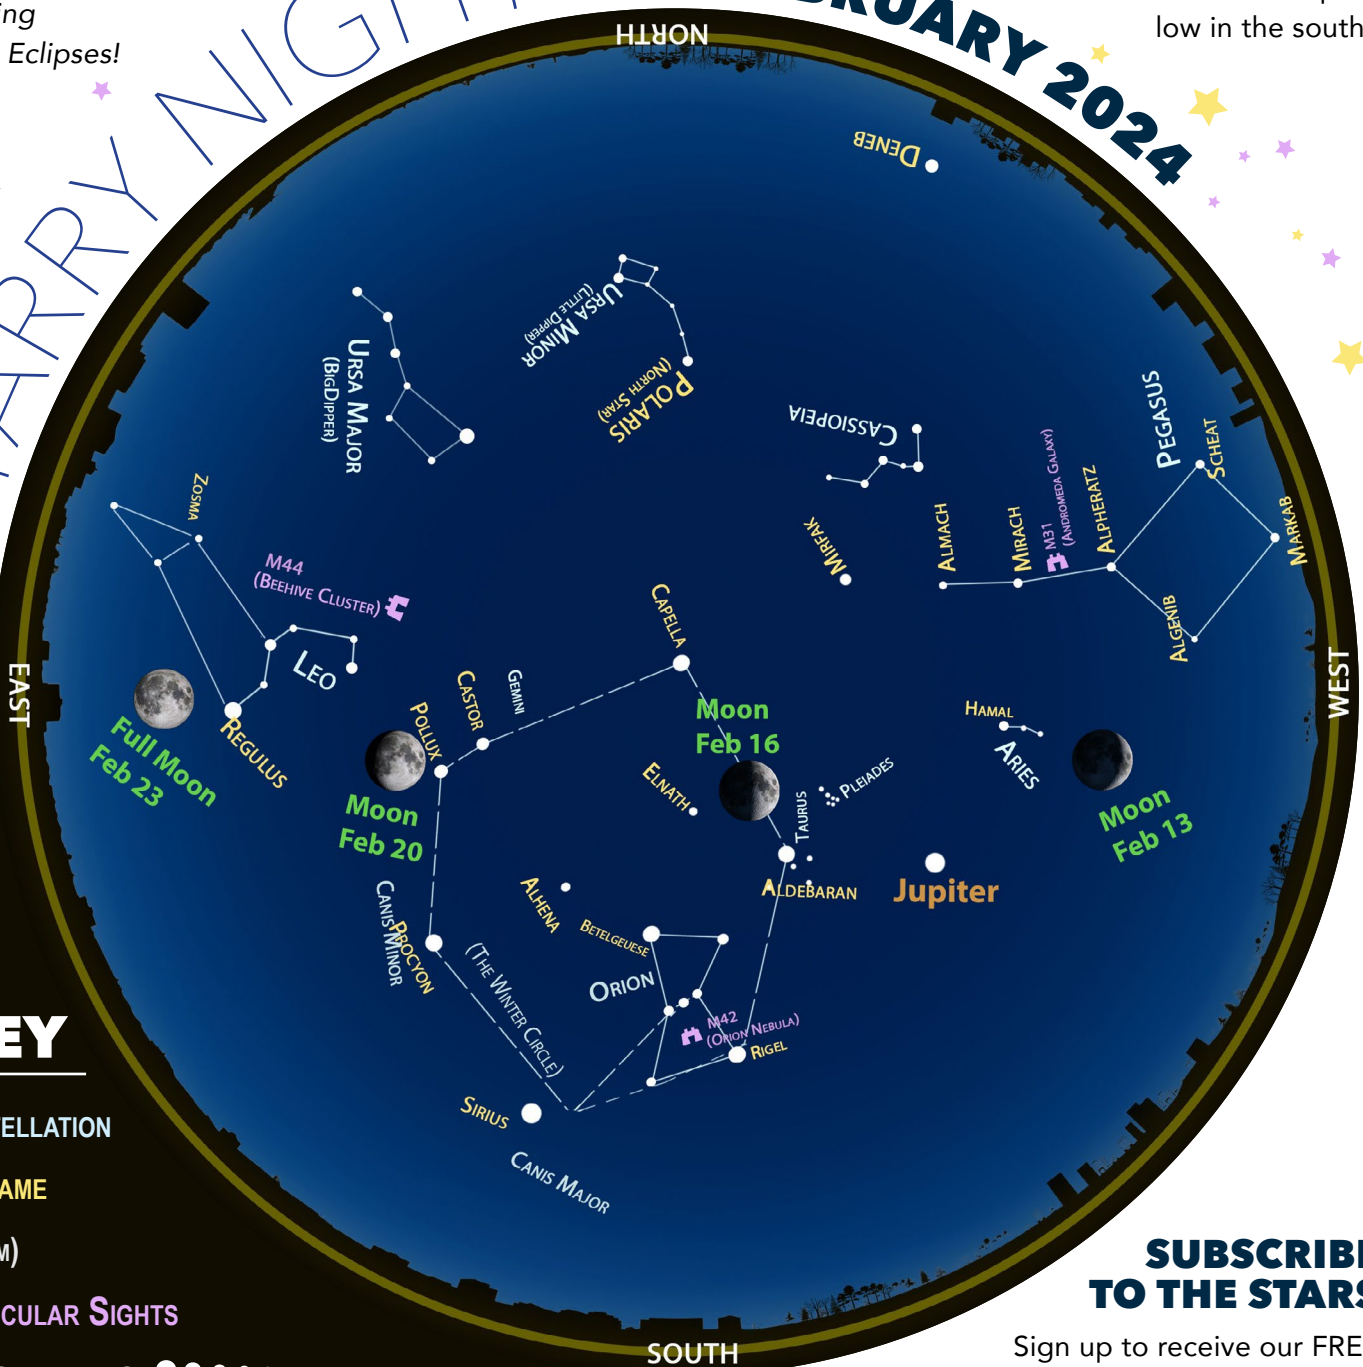

On February 22, spot Venus very close to Mars—though the red planet will be difficult to see. Look for Scorpius low in the south.
