## FEBRUARY 2026

# STARRY NIGHTS

## KEY

CONSTITUTION

STAR NAME

(ASTERISM)

BINOCULAR SIGHTS

STAR MAGNITUDES: 0 1 2 3 4

## HOW TO USE THIS MAP

MPM's star map shows the night sky as it appears on various dates and times. It is designed to be held above your head. Compass directions are indicated along the edge of the circle. Turn the map around its center so the compass direction that appears along the bottom of the map is the same as the direction you face.

## BEST VIEWS

February 1 at 9 p.m.,  
February 15 at 8 p.m., and  
February 28 at 7 p.m.  
Best to use the chart within  
an hour of the times listed.  
This chart is drawn for  
43 degrees latitude but  
may be applied throughout  
the continental USA.

## FEBRUARY MORNING SKY

The bright red star Antares can be seen in the SSE sky. The teapot of Sagittarius is now visible low in the SE. Spica and the Moon shine together February 6-8.
