

HOW TO USE THIS MAP

MPM's star map shows the night sky as it appears on various dates and times. It is designed to be held above your head. Compass directions are indicated along the edge of the circle. Turn the map around its center so the compass direction that appears along the bottom of the map is the same as the direction you face.

PLANETARIUM

JANUARY MORNING SKY

Little Mercury can be seen low in the ESE starting mid month.

Look for it near the Moon on January 19. See Big Dipper high overhead. Then use the handle to "arc to Arcturus" and "speed on to Spica."
