

STARRY NIGHTS

JANUARY 2025

HOW TO USE THIS MAP

MPM's star map shows the night sky as it appears on various dates and times. It is designed to be held above your head. Compass directions are indicated along the edge of the circle. Turn the map around its center so the compass direction that appears along the bottom of the map is the same as the direction you face.

BEST VIEWS

January 1 around 9 p.m.;
January 15 around 8 p.m.;
January 31 around 7 p.m.
Best to use the chart within an hour of the times listed. This chart is drawn for 43 degrees latitude but may be applied throughout the continental USA.

JANUARY MORNING SKY

See big dipper high overhead. Then use the dipper's handle to "arc to Arcturus" and "speed on to Spica."
