STARRY NIGHTS

JUNE 2026

HOW TO USE THIS MAP

MPM's star map shows the night sky as it appears on various dates and times. It is designed to be held above your head. Compass directions are indicated along the edge of the circle. Turn the map around its center so the compass direction that appears along the bottom of the map is the same as the direction you face.

BEST VIEWS

June 1 around midnight;
June 15 around 11 p.m.;
June 30 around 10 p.m.
Best to use the chart within
an hour of the times listed.
This chart is drawn for
43 degrees latitude but
may be applied throughout
the continental USA.

JUNE MORNING SKY

Look high in the east to spot the "W" of Cassiopeia and the square that marks Pegasus. In the southeast, spot Saturn. Low in the east, look for red Mars. Get up early—sunrise is around 5:15 a.m. all month!
