

## HOW TO USE THIS MAP

MPM's star map shows the night sky as it appears on various dates and times. It is designed to be held above your head. Compass directions are indicated along the edge of the circle. Turn the map around its center so the compass direction that appears along the bottom of the map is the same as the direction you face.

## NOW PLAYING

*WI Stargazing*  
*Surviving in Space*

## BEST VIEWS

June 1 around midnight; June 15 around 11:00 p.m.; June 30 around 10:00 p.m. Best to use the chart within an hour of the times listed. This chart is drawn for 43 degrees latitude but may be applied throughout the continental USA.

## JUNE MORNING SKY

High in the east, spot the "W" of Cassiopeia and the square that marks Pegasus. Look SE for Saturn. The moon passes by June 9-10. Jupiter climbs higher each morning in the east.

Get up early—sunrise is around 5:15 a.m. all month!
