

# STARRY NIGHTS

# NOVEMBER 2024

### KEY

CONSTELLATION

STAR NAME

(ASTERISM)

BINOCULAR SIGHTS

STAR MAGNITUDES: ●●●●●  
0 1 2 3 4

## HOW TO USE THIS MAP

MPM's star map shows the night sky as it appears on various dates and times. It is designed to be held above your head. Compass directions are indicated along the edge of the circle. Turn the map around its center so the compass direction that appears along the bottom of the map is the same as the direction you face.

## BEST VIEWS

November 1 around 8 p.m.;  
November 15 around 7 p.m.;  
November 30 around 6 p.m.  
Best to use the chart within an hour of the times listed. This chart is drawn for 43 degrees latitude but may be applied throughout the continental USA.

## NOVEMBER MORNING SKY

See bright Jupiter low in the west and Mars high in the SW sky amongst the stars of Gemini. Spot Orion and his dog stars, Sirius and Procyon, in the western sky.
