NOVEMBER 2025

STARRY NIGHTS

HOW TO USE THIS MAP

MPM's star map shows the night sky as it appears on various dates and times. It is designed to be held above your head. Compass directions are indicated along the edge of the circle. Turn the map around its center so the compass direction that appears along the bottom of the map is the same as the direction you face.

BEST VIEWS

Early November 8 p.m. and late November 7 p.m. Best to use the chart within an hour of the times listed. This chart is drawn for 43 degrees latitude but may be applied throughout the continental USA.

NOVEMBER MORNING SKY

Look for the Big Dipper high in the north sky. Below the Dipper, spot Leo the Lion high in the south. Planet Venus is still visible very low in the ESE. Jupiter shines in Gemini in the west.
