

# STARRY NIGHTS

**OCTOBER 2025**

## HOW TO USE THIS MAP

MPM's star map shows the night sky as it appears on various dates and times. It is designed to be held above your head. Compass directions are indicated along the edge of the circle. Turn the map around its center so the compass direction that appears along the bottom of the map is the same as the direction you face.

## BEST VIEWS

October 1 at 9 p.m.;  
October 15 at 8 p.m.;  
October 31 at 7 p.m.  
Best to use the chart within an hour of the times listed. This chart is drawn for 43 degrees latitude but may be applied throughout the continental USA.

## OCTOBER MORNING SKY

Spot blazing Venus very low in the ESE sky. Jupiter will be very high in the south. Look southwest for Orion and his two dog stars, bright Sirius and Procyon.
