

# HOW TO USE THIS MAP

MPM's star map shows the night sky as it appears on various dates and times. It is designed to be held above your head. Compass directions are indicated along the edge of the circle. Turn the map around its center so the compass direction that appears along the bottom of the map is the same as the direction you face.

# BEST VIEWS

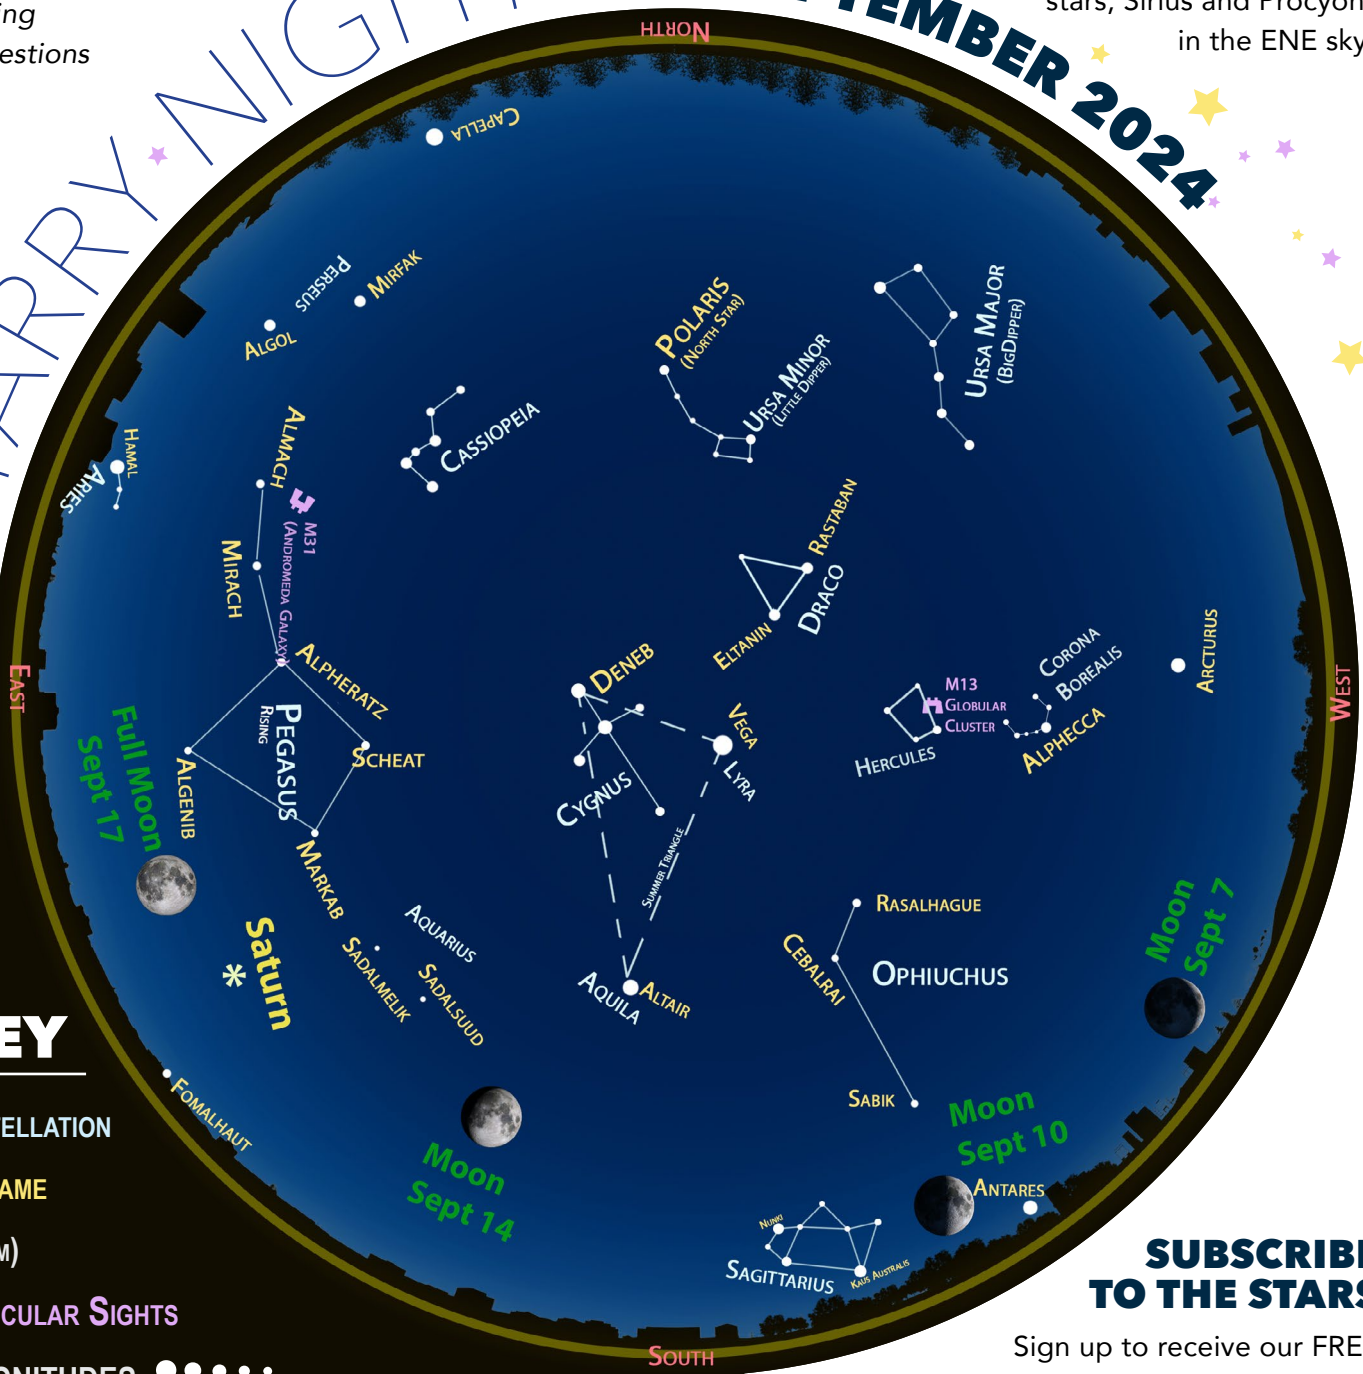

September 1 at 11 p.m.,  
September 15 at 10 p.m., and  
September 30 at 9 p.m. Best  
to use the chart within an hour  
of the times listed. This chart is  
drawn for 43 degrees latitude  
but may be applied throughout  
the continental USA.

# SEPTEMBER MORNING SKY

The Moon rolls by Jupiter and Mars from September 23-26. Look high in the sky for Gemini. Orion is very visible with the two dog stars, Sirius and Procyon, in the ENE sky.
